

Company profile

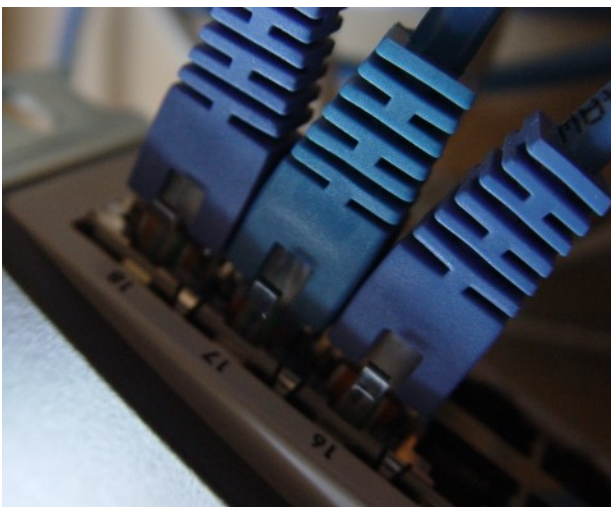

Stickfish is an ICT company specialising in enterprise Linux and Unix technologies. Its strategy is to supply complete solutions: from analysis of requirements and the finding of the best solution, to training and subsequent technical support or outsourcing of maintenance. Stickfish provides solutions from leading vendors such as Sun, IBM, Red Hat, Oracle, or VMware, advanced networking products from Juniper and also its own highly secure and fast virtual enterprise desktop solution, Raydesk. Stickfish operates popular electronic stores 64bit.biz and technically oriented Internet portals AbcLinuxu.cz and ITBiz.cz.

At Stickfish, we strive for a flexible approach that enables us to create an offering with all the attributes of a modern IT company. We deliver and develop technologies that help you keep the pace of your thoughts, business, and team. Since we entered the market in 2003, we have become a reliable part of the technology community. We fulfil the role of a responsible solution supplier for both the commercial and government sectors.

We endeavour to satisfy our clients from the very first contact. We take care to maintain friendly and effective relationships with all our business partners. Every day, we seek for the right arguments and words to help us understand today's world which abounds with dynamic changes and needs of the society and individuals. We operate professional websites with good reputation in the Czech Republic, and provide space for meetings of communities and individuals, allowing our users to gain information and openly share their opinions.

High level of acquired responsibility for technology and its operation, demands the highest level of commitment to our warranties and support. Every year, commercial organisations come to recognise our complex professional approach which we achieve while maintaining an attitude of openness. The responsibility to further develop these relationships is a challenge and a long-term obligation for all companies. The resolve to maintain the trend of consecutive years of growth, not only in terms of economic indicators but also in mutual relationships, is a task Stickfish faces with a great team and also our demanding customers.

Technologies

Servers and storage
Virtual desktops
Technical support

Portals

Top Czech ICT portal
Prestigious IT portal
IT job portal

Internet shops

Server sale
Firewall sale
Dedicated hosting

Open Company

Our responsibility towards the community of IT professionals and developers stems not only from our support of open source solutions but also from our push for open standards. For example, our Raydesk virtual desktop is multi-platform (Windows, Linus, Solaris) and supports various communication protocols: Microsoft RDP, Citrix ICA, or standard X11.

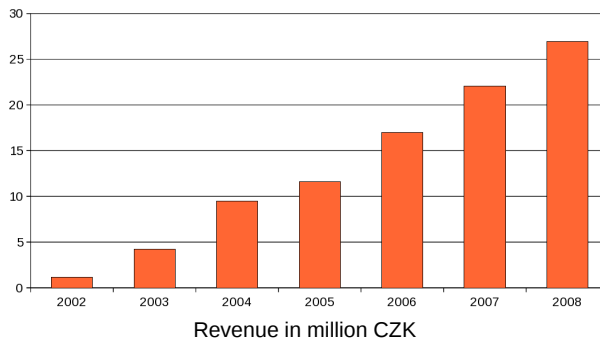

Partnerships

We have been the fastest growing Sun Partner Advantage partner in the Czech Republic since 2003 and we continue this trend. We were named the Partner of the Year for 2007 and 2008 by Sun Microsystems in the area of x64-86 servers and the TOP Partner of the Year by SOFT-TRONIK, a. s. (Arrow/DNSint in the CR). For two years, we have been one of the top sellers of the Juniper Networks security solutions in the area of firewalls and IDP.

Economic Results

We are growing faster than the entire ICT market. This growth puts considerable pressure on the organisation. Stickfish is aware of this challenge and intends to eschew any compromise in quality or responsibility while maintaining a higher rate of development than others.

We Are a Responsible Citizen and Supplier

We believe further development of our society is dependent upon IT, Internet, and communications in general. As the Earth's natural resources are limited we try to be a responsible consumer of energy and natural resources. Our product, the Raydesk virtual desktop environment, allows our customers to achieve significant energy savings compared to regular personal computers.
